

**Project Title:** Rental Car Website

**Day:** 1

**Objective:**

I am developing a fully responsive rental car website with dynamic content management using Sanity CMS and API integration for seamless data handling.

**Features:**

- Home page with featured car listings from Sanity CMS
- Car details page with specifications, pricing, and images
- Search and filter functionality (by price, type, brand)
- Booking form with form validation
- API integration for fetching car data from Sanity CMS
- Responsive UI for mobile and desktop

**Tech Stack:**

Next.js, React, TypeScript, Tailwind CSS, Sanity CMS, API integration, Context API

**Deployment:**

Vercel
